

MESSAGE FROM THE PRESIDENT

What an exciting 2006! During the past year we enjoyed a number of major events and successes. We celebrated our 20th anniversary; we were awarded 2006 Technology Company of the Year by the Technology Council of Central Pennsylvania; and we realized record-high revenues for our operations nationwide.

This year will hold new challenges and opportunities, and we are already off to a great start. We have landmark wins in all of the markets we pursue, including being awarded a contract with the New York City government, which is featured in this issue.

All of our success would not be possible without the support of our exceptional clients and business partners. We look forward to working with you throughout 2007.

Robert M. Scaer, P.E.
President, GeoDecisions

WE NEW YORK

Start spreading the news! GeoDecisions was granted two five-year, open-end contracts by the City of New York Department of Information Technology and Telecommunications. Through the Geographic Information Technologies and Services/Citywide Class 1 and Class 2 contracts, GeoDecisions has the opportunity to perform geographic information system (GIS) services for approximately 30 New York City agencies and bureaus in a variety of assignments.

MILITARY

IRRIS® Named a Solution of Choice

IRRIS was named one of the top-performing technical solutions in the Coalition Warrior Interoperability Demonstration (CWID) 2006 Final Report. In the document, IRRIS was recommended as a solution of choice by participating warfighters, operators, and various working groups.

CWID is an annual event sponsored by the Joint Chiefs of Staff that enables U.S. Combatant Commands and the international community to identify and evaluate new and evolving technologies that can improve warfighting capabilities.

Operators participate in CWID.

GOVERNMENT

Safer Highways in Delaware

The Delaware Office of Highway Safety contracted with GeoDecisions to develop and implement a Web-based information management system that will play a role in saving lives and preventing injuries on Delaware highways. When complete, the system will provide quick and efficient access to highway incident data that will help officials make more informative decisions about preventing and responding to incidents and events that impact public safety.

TRANSPORTATION

A Monumental Achievement

Working with GeoDecisions, the Nevada Department of Transportation (NDOT) migrated an internal desktop system that indexes and retrieves records on survey monuments to a GIS-enabled Web application. The Location Information System (LoIS) Web application enables NDOT staff, private surveyors, and the public to access NDOT's expanding database of more than 41,000 survey points across the state. In early 2006, LoIS transitioned from an intranet to an Internet application, and is now online at www.nevadadot.com/reports_pubs/lois. LoIS was recently featured in the fall 2006 edition of *NDOT News*.

LoIS was created with the support of (from left) Grahame Ross, NDOT; Bill Schuman, GeoDecisions; and Dave Hamlin, Gary Ballew, and Eric Warmath of NDOT.

COMMERCIAL

Partnership with Daffron & Associates, Inc.

GeoDecisions recently teamed with Daffron, based in Bowling Green, Mo., to provide rural electric cooperatives the ability to better manage their data. Daffron offers solutions specifically designed for utilities, including integrated consumer information, materials, financial management, e-business, and work order automation software. GeoDecisions complements Daffron's services by providing utility mapping services and GIS. With the GIS, users can perform various queries, quickly compile data and generate accurate reports, check flow and connectivity, and better manage workforce and assets.

This example displays how aerial ortho-photography is used as a base reference for locating and spatially enabling electrical assets in the creation of GIS features.

As part of our 20th anniversary celebrations last year, nearly 100 people had a blast forming the GeoDecisions logo.

WE'RE EXPANDING!

GeoDecisions' Newark, Del., location has expanded with additional office space to better serve clients in Delaware and beyond. The address remains the same:

Plaza 273
56 W. Main St., Suite 207
Christiana, DE 19702
Phone: (302) 731-7531
